FLUIDS AND LUBRICANTS

TABLE OF CONTENTS

CAPACITIES AND LUBRICANTS	:
ENVIRONMENT	
ENGINE LUBRICATION	
Engine Oil Selection	
Oil Viscosity/Temperature Ranges	
DIESEL FUEL SYSTEM	-
Fuel Storage	
Specifications for Acceptable No. 2 Diesel Fuel	:

CAPACITIES AND LUBRICANTS

FUEL TANK Capacity Specifications	
Recovery bottle capacity	
Specifications	
Specifications	5.7 litres (6.0 quarts) Case No. 1 Engine Oil, SAE 10W30
	As required Distilled water
Attachments (If equipped)	As required Quantity as required Case molydisulfide grease
Capacity - without filter change Specifications	

ENVIRONMENT

Before you service this machine and dispose of oil, fluids and lubricants, always remember the environment. Do not put oil or fluids into the ground or into containers that can leak. Check with your local environmental, recycling center or your Case dealer for correct disposal information.

ENGINE LUBRICATION

Engine Oil Selection

Case No. 1 Engine Oil is recommended for use in your Case Engine. Case Engine Oil will lubricate your engine correctly under all operating conditions.

Case Multi-Viscosity Engine Oil meets API engine oil service category CH-4 SAE 15W-40

See the chart below for recommended viscosity at ambient temperature ranges.

NOTE: Do not put Performance Additives or other oil additive products in the engine crankcase. The oil change intervals given in the operating manual are according to tests with Case lubricants.

BS00H001

Oil Viscosity/Temperature Ranges

Indicates use of an engine oil heater or a jacket water heater is required.

BS99N019

DIESEL FUEL SYSTEM

Use No. 2 diesel fuel in the engine of this machine. The use of other fuels can cause the loss of engine power and high fuel consumption.

In very cold temperatures, a mixture of No. 1 and No. 2 diesel fuels is temporarily permitted. See the following:

NOTE: See your fuel dealer for winter fuel requirements in your area. If the temperature of the fuel lowers below the cloud point (wax appearance point), wax crystals in the fuel will restrict the fuel filter and cause the engine to loose power or not start.

The diesel fuel used in this machine must meet the specifications below, "Specifications for Acceptable No. 2 Diesel Fuel" or Specification D975-81 of the American Society for Testing and Materials.

Fuel Storage

If you keep fuel in storage for a period of time, you can get foreign material or water in the fuel storage tank. Many engine problems are caused by water in the fuel.

Keep the fuel storage tank outside and keep the fuel as cool as possible. Remove water from the storage container at regular periods of time.

Fill the fuel tank at the end of the daily operating period to prevent condensation in the fuel tank.

Specifications for Acceptable No. 2 Diesel Fuel

API Gravity, Minimum	
Flash Point, Minimum	60°C (140°F)
Cloud Point (wax appearance point), Maximum	-20°C (-5°F)
Pour Point, Maximum	26°C (-15°F)
Distillation Temperature, 90% Point	282 to 338°C (540 to 640°F)
Viscosity, at 38°C (100°F)	
Centistokes	2.0 to 4.3
Saybolt Seconds Universal	32 to 40
Cetane Number, Minimum	43 (45 to 55 for winter or high altitudes)
Water and Sediment, by Volume, Maximum	0.5 of 1%
Sulphur, by Weight, Maximum	0.5 of 1%
Copper Strip Corrosion, Maximum	No. 2
Ash, by Weight, Maximum

1-1/2 inch	3895 to 4375	2870 to 3225	
NOTE: Use thick	nuts with Grade 8	bolts.	

TORQUE SPECIFICATIONS - METRIC HARDWARE

Use the following torques when specifications are not given.

These values apply to fasteners with both coarse and fine threads as received from supplier, plated or unplated, or when lubricated with engine oil. These values do not apply if graphite or Molydisulfide grease or oil is used. Use of a click type torque wrench, or better is required.

Grade 8.8 Bolts, Nuts, and Studs		
8.8		
Size	Newton metres	Pound- Inches
M4	3 to 4	31 to 35
M5	5 to 6	49 to 55
M6	10 to 11	84 to 94
M8	23 to 26	229 to 277
M10	46 to 51	408 to 460
		Pound- Feet
M12	80 to 90	59 to 66
M14	128 to 145	94 to 106
M16	200 to 220	149 to 161
M20	400 to 450	293 to 330
M24	690 to 780	510 to 575
M30	1375 to 1545	1010 to 1140
M36	2400 to 2700	1770 to 1990

Grade 10.9 Bolts, Nuts, and Studs			
	(10.9)		
Size	Newton metres	Pound- Inches	
M4	5 to 6	44 to 49	
M5	8 to 9	71 to 79	
M6	14 to 15	120 to 136	
M8	33 to 37	293 to 329	
		Pound- Feet	
M10	65 to 74	48 to 54	
M12	114 to 128	85 to 94	
M14	183 to 205	136 to 153	
M16	285 to 320	208 to 235	
M20	555 to 620	406 to 460	
M24	955 to 1075	705 to 790	
M30	1900 to 2140	1400 to 1580	
M36	3315 to 3730	2445 to 2750	

Grade 12.9 Bolts, Nuts, and Studs

Usually the torque values specified for grade 10.9 fasteners can be used satisfactorily on grade 12.9 fasteners.

-14	3/4 - 14	2.0 - 3.0		
-16	1 - 11 1/2	1.5 - 2.5		
-20	1 1/4 - 11 1/2	1.5 - 2.5		
-24	1 1/2 - 11 1/2	1.5 - 2.5		
-32	2 - 11 1/2	1.5 - 2.5		

NOTE: Apply sealant/lubricant to male pipe threads. The first two threads should be left uncovered to avoid system contamination. Screw pipe fitting into female pipe port to the finger tight position. Wrench tighten fitting to the appropriate turns from finger tight (TFFT) shown in table above, making sure the tube end of an elbow or tee fitting is aligned to receive incoming tube or hose fitting.

ENGINE AND RADIATOR REMOVAL AND INSTALLATION

TABLE OF CONTENTS

RADIATOR	 3
Removal	
Installation	 4
ENGINE	
Removal	
Installation	 11

RADIATOR

Removal

NOTE: Put caps on all fittings and plugs in all disconnected hoses.

STEP 1

Park the machine on a level surface. Remove the bucket or attachment from the loader arms. Raise the loader arms and lock the loader arms into the raised position.

STEP 2

Turn the ignition switch and the master disconnect switch (if equipped) to the OFF position.

STEP 3

Disconnect the negative battery cable from the battery.

STEP 4

Tilt the cab forward.

STEP 5

Open the hood and rear access door on the machine.

STEP 6

Let unite cool then slowly loosen the radiator cap (2). Disconnect the overflow hose (21) from the radiator neck.

NOTE: Refer to illustration on page 5.

STEP 7

If equipped with a heater, open the heater coolant valves on the engine.

STEP 8

BD01C133

Install a hose on the drain valve (8) and drain the radiator (1) into a clean container that holds approximately 17 litres (4.5 gallons).

NOTE: Refer to illustration on page 5.

STEP 9

If equipped with a heater, close the heater coolant valves on the engine.

STEP 10

Loosen the clamps (4) on the lower radiator hose (5) and clamps (3) on the upper radiator hose (6).

NOTE: Refer to illustration on page 5.

STEP 11

Remove the three bolts (25), washers (26), and nuts (29) that fasten the fan guard (24) to the radiator (1). Remove the fan guard.

NOTE: During assembly torque the bolts (25) 15 to

20 Nm (120 to 180 pound-inches).

NOTE: Refer to illustration on page 12.

STEP 12

BD01M004

Loosen and remove the bolts (9), washers (10, 11, and 13), mounts (12), and nuts (14) that fasten the bottom of the radiator (1) to the frame.

NOTE: During assembly torque the bolt (9) 30 to 36 Nm (265 to 319 pound-inches).

STEP 13

Loosen and remove the bolts (15), washers (16, 17, and 19), mounts (18), and nuts (20) that fasten the right side and left side of the radiator (1) to the frame.

NOTE: During assembly torque the bolts (15) 30 to 36 Nm (265 to 319 pound-inches).

STEP 14

Move the radiator (1) away from the upper radiator hose (6) and lower radiator hose (5). Remove the radiator (1) from the machine.

STEP 15

Remove the over flow bottle (23) and bracket (22).

Installation

STEP 16

Installation of the radiator is the revers of removal.

RADIATOR

ENGINE

Removal

STEP 1

Remove the radiator from the machine.

STEP 2

Install plugs and caps on all disconnected hoses and fittings.

STEP 3

Tag all electrical connection for identification during assembly.

STEP 4

If equipped with a heater, disconnect the heater hoses.

STEP 5

Disconnect the electrical connectors from the rear tail lamps on both sides and the rear work light on the rear access door. Put the electrical harness out of the way.

STEP 6

Tag and disconnect the hoses from the oil cooler on the rear access door.

STEP 7

Connect acceptable lifting equipment to the rear access door.

STEP 8

Loosen and remove the nut, spacer, bolt, and washer from the door.

STEP 9

Remove the door from the machine.

STEP 10

1. CYLINDER PIVOT BOLT

Remove the nut from cylinder pivot bolt (1) on the hood end of the cylinder.

STEP 11

Remove the bolt, washer, and nut from the hood catch cable.

STEP 12

Push the hood to the right hand side of the machine and remove the left hand side of the hood from the pivot pin. Remove the hood from the machine.

STEP 13

- BD01M007
- 1. AIR RESTRICTION INDICATOR SWITCH
- 2. STARTING AID

Disconnect the electrical connector for the air restriction indicator switch (1) and starting aid switch (2).

STEP 14

Loosen the clamps (49) on the intake manifold hose (50). Remove the hose from the intake and air filter assembly (48).

NOTE: Torque clamps (49) 3 to 4 Nm (25 to 35 pound inches) during assembly

pound-inches) during assembly.

NOTE: Refer to illustration on page 13.

STEP 15

Loosen and remove the bolts (55), and washers (56) from the air filter clamp bracket (51).

STEP 16

Remove the air filter (48) assembly, air filter clamp (52), and bracket (51) from the machine.

STEP 17

Remove the elbow (59) by loosing the clamp (58) on the engine intake side.

NOTE: Refer to illustration on page 14.

STEP 18

BD0°

Loosen and remove the bolts (63), lock washer (64), and washer (65) from the bracket (62).

STEP 19

Loosen the exhaust clamp (76) and remove the muffler (61) from the exhaust outlet elbow (75).

STEP 20

Remove the bolts (27), washers (28), fan blade (30), and spacer (31) from the engine (38).

NOTE: Refer to illustration on page 12.

STEP 21

- 1. STARTER WIRES
- 2. GROUND STRAP

Disconnect the wires (1) from the starter solenoid.

STEP 22

Loosen and remove the starter mounting bolt and washer that holds the ground strap (2). Remove the ground strap from the bolt. Install the washer and starter mounting bolt.

STEP 23

Remove the bolt and wire harness clamp from the LH side of the engine.
